

ModuCLEAN – Inside Out Cleaning System

Habasit, your Partner for Conveying Solutions, is pleased to introduce the **ModuCLEAN** System. Specifically designed to reduce cleaning time and costs, **ModuCLEAN** consists of a precision machined high density polyethylene multi-tooth sprocket with an engineered spray nozzle cleaning system. By combining the patented **ModuCLEAN** System with HabasitLINK® modular belts and HabaGUARD® antimicrobial technology, Habasit offers the most comprehensive package available to help you improve hygiene and sanitation standards in your plant.

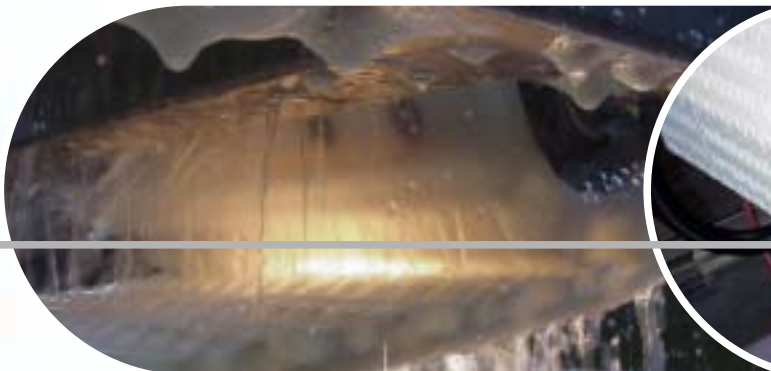

ModuCLEAN Saves Money and Increases Productivity

- Since water and cleaning agents are directed only where needed, actual water usage and wastewater processing can be reduced
- Improved cleaning in hinge areas and rod recesses is consistent and predictable
- Automatic operation reduces labor costs and frees personnel for other activities
- Consistent cleaning increases on-time start-ups

ModuCLEAN Improves Cleaning

- Positive tooth engagement and precision nozzles aim cleaning water directly at the hinge area as it opens
- Combined with HabasitLINK's® open hinge design, cleaning from the inside out forces debris out from between the belt modules
- Detergent and Sanitizers can be automatically applied

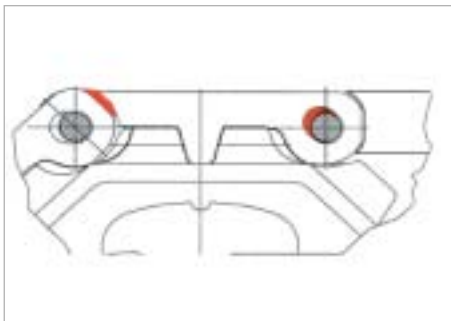

ModuCLEAN Installation

Installing the **ModuCLEAN** System couldn't be easier. Simply replace an idler roller with a 4, 6, or 10 inch diameter **ModuCLEAN** unit, and connect the water supply. A detergent/sanitizer supply can also be connected, if desired.

Habasit is the full-range belting manufacturer to the food industry. Our belts are engineered for easier cleaning, and to provide longer service life. Contact us for a solution if you want to improve sanitation and reduce down-time.

For more information on how **ModuCLEAN** can help you reduce costs and maximize productivity in your plant, please contact your Habasit Representative today.

Conveying Quality - Habasit is the only company that offers both Domestic and European fabric belts as well as plastic modular belts. We manufacture from virgin raw materials to ensure products that meet our standards. We offer many different training opportunities to enhance or maintain the level of belting knowledge at your company.

Conveying Service - Habasit has expert Distributor partners throughout the US who are committed to providing the best service, local inventories, belt installation capabilities, 24 Hour delivery service, and strong application and troubleshooting knowledge. Chances are that one of our partners is your neighbor. If you prefer to install your own belts, Habasit can supply you with splicing equipment that we manufacture specifically for preparing and splicing our belts on-site, and the necessary training to help your people become fabrication ready.

Conveying Solutions - Contact one of our Product Managers, Market Managers, Engineers, District Managers or Authorized Distributors for the optimal solution for your application. The breadth of our product line allows us to recommend the right belt for each application.

The quality management system of HBI is registered to ISO 9001:2000 by AQA International.
